

Critical Scenario Generation

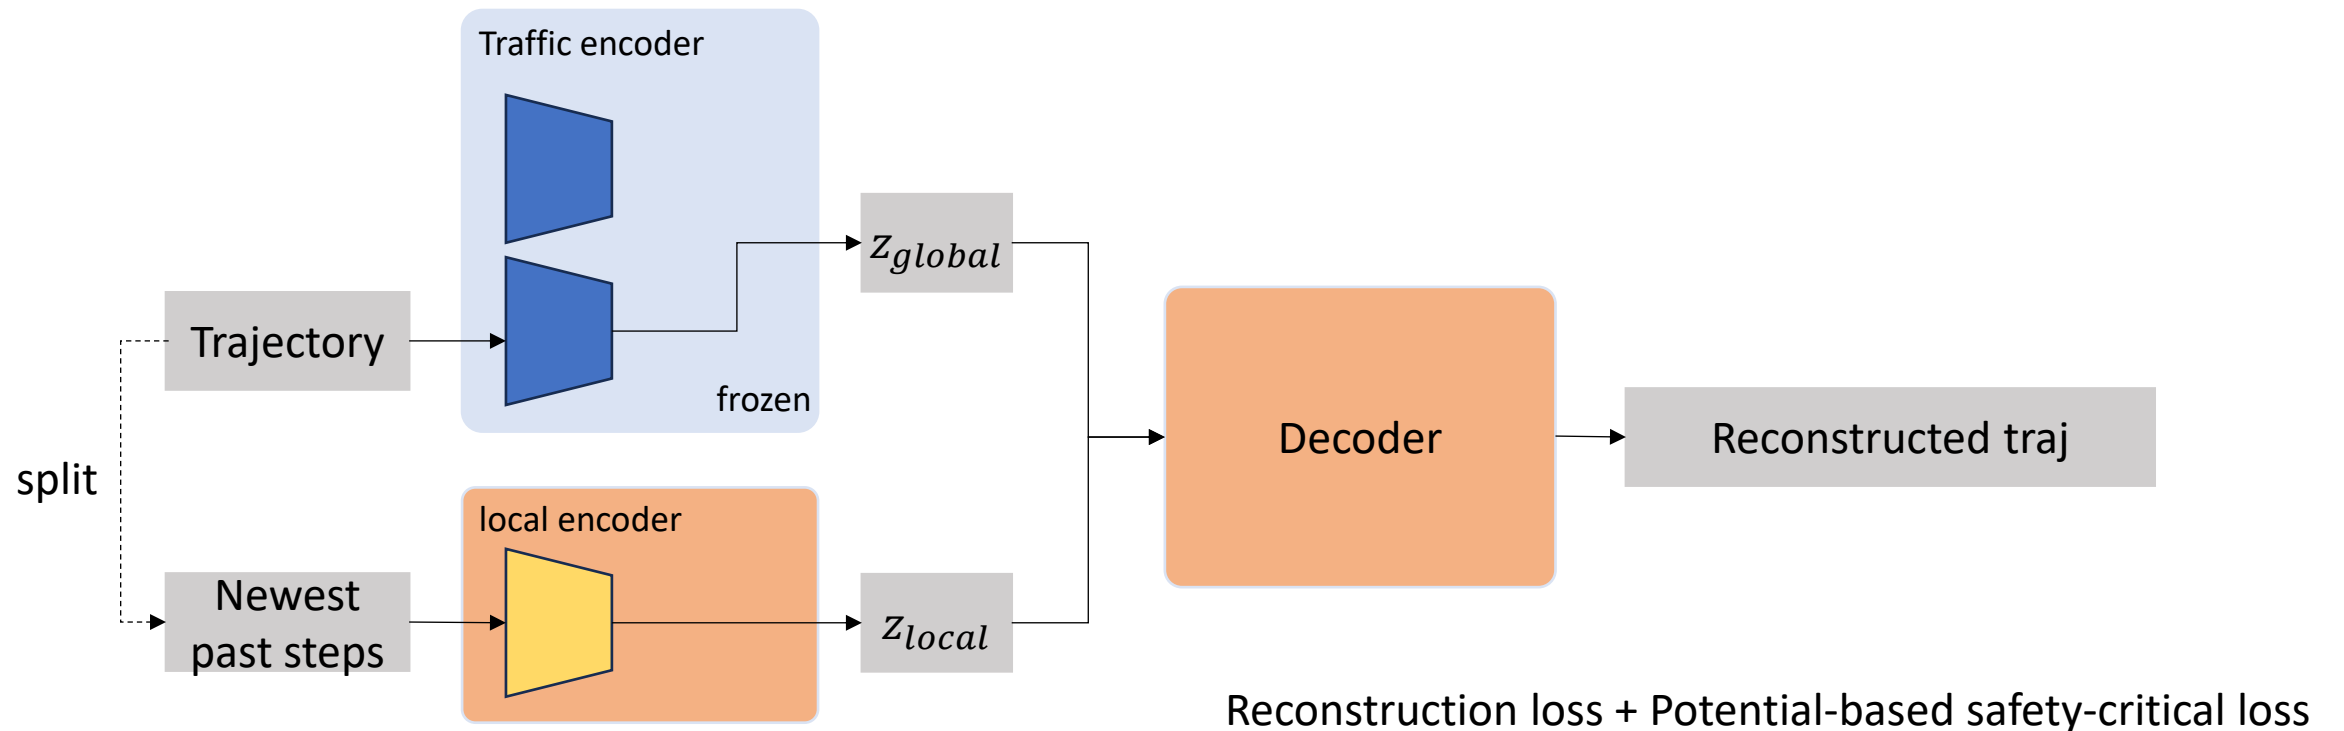

- Our Limitations
 - Lack of interaction-induced planner behavior data
 - Closed-loop representation(Planner modeling) is difficult with current decoder
 - STRIVE's collision loss is very discrete
 - SAGA, KING : Potential-based loss -> more gradient-rich!
- Development
 - Data augmentation that induces planner behavior(response)
 - Add a more localized feature extraction encoder
 - Apply more gradient-rich loss

Critical Scenario Generation

Critical Scenario Generation

- Traffic + Planner model (Training)
 - Using augmented semi-adversarial data

Critical Scenario Generation

- Traffic + Planner model (Deploy)
